- ▶ Full HTML message support
- ▶ Powered by Formativ

ADVANSYS®
archive2go.com

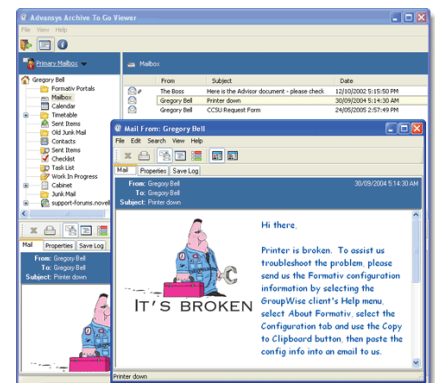

Secure GroupWise® audits.

GWAVA Reveal and Advansys Archive To Go integrate to deliver secure enterprise auditing and evidence recovery capabilities. Use Reveal to isolate critical GroupWise information and Archive To Go to preserve it in a comprehensive, portable research archive.

Seamlessly accessible from Reveal, Archive To Go makes it easy to secure all messages, including attachments, into a ready-to-go format complete with viewer. Messages and mailboxes can be exported without detection.

To meet compliance needs, exported messages are faithful representations of the GroupWise original, including:

- All file and embedded message attachments
- Additional GroupWise metadata - message properties, folder, categories, custom fields, ID, save log
- Plain text and HTML formats

Archive To Go also offers export options for inclusion of GroupWise Archives and Shared Folders.

Find information within your archives. Fast.

With the supplied viewer software, accessing an Archive To Go portable archive is easy and familiar. Designed to operate similar to the GroupWise client, exported messages can be located quickly within their original folder structure, either manually or via high speed text search. Once the desired message is found, you can preview, open, reply, forward or print it.

Archive To Go is backed by Advansys, a software development company with more than 12 years GroupWise experience. For more information and **free** trial software, visit www.archive2go.com. For information on GWAVA Reveal, visit www.gwava.com.
